## **DETAILED ACTION**

### ***Response to Amendment and Arguments***

1. Applicant's amendment filed on May 5, 2006 has been entered and made of record.
2. In view of applicant's amendment, the claim objection is withdrawn.
3. Applicant's arguments with respect to claims 40-116 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 40-116 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Referring to claim 40, the phrase "INTRA predication of an image block within the same image as said current decoded image block and said previously decoded image block" is not sufficiently supported by the applicant's specification. As disclosed on page 18, lines 21-27 in conjunction with figure 5 of the applicant's specification, INTRA prediction is performed by

using previously decoded image blocks to predict pixel values of a **current block**. Subsequently, the current block is block filtered based on previously decoded image blocks and the filtered blocks are then used for the INTRA prediction of subsequent blocks (Specification page 19, lines 18-23).

The Examiner was unable to find an instance in the applicant's specification that supports the claimed feature of "INTRA prediction of an image block within the same image as said current decoded image block and said previously decoded image block," wherein "said current decoded image block" and "said previously decoded image block" are used during the block filtering process. Therefore, the claimed features are not supported by the applicant's specification. Similar rejections are also applicable to claims 52, 58, 65, 76, 83, 94, 97, 98, 108, 111, 114.

Claims not mentioned specifically are dependent from non-supported antecedent claims.
